Hi, I'm Marcello

i'm a System Analyst
Business Analyst
Digital Business Student
UI/UX Enthusiast
Data Analyst Enthusiast

I am an undergraduate student in Digital Business Innovation (Information Systems & Creativepreneurship) at Binus University Bandung. With a keen interest in Business and System Analytics, I leverage my analytical thinking and problem solving abilities to create solutions rooted in data and technology.

My Skills

Technical Skills

- Figma
- Java / Eclipse
- SQL
- Ms. Excel
- PowerPoint
- Scene Builder

Professional Skills

- Analytic Skill
- Problem Solving
- Communication
- Collaboration
- Time Management

My Education

2023 - Present

Binus University Bandung

Undergraduate Student
Digital Business Innovation
(Information Systems & Creativepreneurship)

2020 - 2023

SMAK 1 BPK PENABUR Bandung

High School Diploma

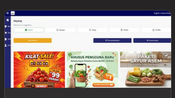
My Experience

2020 - 2023

Anggota Majelis Perwakilan Kelas (MPK)

SMAK 1 BPK PENABUR Bandung

Recent Projects



VeggieBox (E-commerce Application)

VeggieBox is an e-commerce application designed to simplify the shopping experience for fresh vegetables and cooking ingredients.

Mendix | Atlas UI | Microflows | XPath

SoapGo (Laundry Web)

SoapGo is a web and desktop-based application project designed specifically for laundry business management.

Java | JavaFx | MySQL | SceneBuilder

Pet Care (Pet Care Services Application)

Pet Care is a mobile application designed to address the inefficiencies of manual booking systems by providing an integrated on-demand platform for grooming and veterinary consultation services.

My Journals

Brand Image, Perceived Value, System Quality, E-Satisfaction, E-Loyalty

This research paper investigates the impact of brand image, perceived value, and system quality on e-satisfaction and their subsequent effect on e-loyalty within the e-commerce industry, based on a quantitative survey of 244 users in Bandung. Using a Partial Least Squares (PLS) analysis, the study reveals that all three independent variables significantly influence e-satisfaction, with perceived value demonstrating the strongest effect. The findings highlight that e-satisfaction serves as a critical mediator with a highly significant direct impact on e-loyalty, suggesting that e-commerce platforms must integrate improvements in system quality, value perception, and brand image to foster long-term customer commitment.

Pet Care Services on Demand: A Mobile App for Scheduling Veterinary and Grooming Services

This paper proposes a mobile application solution to streamline pet care services, specifically veterinary consultations and grooming, by addressing inefficiencies in traditional manual booking systems. Utilizing the Double Diamond design methodology, the study outlines the development of an on-demand platform featuring automated scheduling, real-time notifications, and secure digital payment integration to enhance user experience and operational efficiency. The research highlights the growing digital transformation in the pet industry and demonstrates how a user-centered, integrated mobile solution can effectively connect pet owners with service providers, offering a scalable business model for the future of digital pet care.

Ensuring Convenience and Safety: The Role of Mobile Catering Apps in Modern Food Delivery in Indonesia

This paper explores the development of a mobile catering application designed to modernize the food delivery industry in Indonesia by replacing inefficient manual booking processes with a digital solution that prioritizes both convenience and safety. Utilizing the Double Diamond design methodology, the study outlines the creation of a comprehensive platform featuring seamless ordering, real-time tracking, and contactless payments to address post-pandemic consumer demands. Through detailed system architecture visualizations including Use Case, Data Flow, and Entity Relationship diagrams, the research demonstrates how integrating user-friendly features with strict safety protocols can significantly enhance customer satisfaction and operational efficiency for service providers.
